ABSTRACT:

To facilitate the use of portable digital devices such as cell phones, printer
processing stations are proposed for printing the information that is accessible
through the portable digital devices. In general, the portable digital devices have
easy access to an enormous amount of information but are equipped with a relatively
small display screen without an on-board printing capability. To solve the above
dilemma, readily available printer stations allow the user to print a selectable
portion of the information at one of the predetermined locations and conveniently
charge the user for a print fee.
